

STRIP HARDNESS TESTER

SPECIFICATIONS

Quick and easy measurement, it only requires a sample of the water to be tested and a test strip, which in contact with the water changes color and gives an approximate value of the total hardness.

FEATURES

- ✔ Quick and easy to use test
- ✔ Portable and reliable
- ✔ Wide measuring range (0 ppm - 425 ppm)

APPLICATIONS

SPECIFICATION TABLE

| MODEL | PARAMETER TO BE MEASURED | MEASUREMENT | METHOD OF ANALYSIS | CHEMICAL METHOD |
|----------------|--|------------------|--------------------|-------------------------|
| PK-TIRASDUREZA | Total Hardness = CaCO ₃ (SARRO) | Color evaluation | Test strips | Colorimetric test paper |

* Operating temperature range: 10°C to 30°C (50°F to 86°F)

Including

- ✔ 100 Test strips
- ✔ Packing with shades to match the hardness of the liquid

DIMENSIONS AND WEIGHTS

Weight: 0.09 lb

INSTRUCTIONS

1

Take a sample of water in a clean container.

2

Immerse the test strip for 1 second, remove and shake off excess water.

3

Wait 15 seconds and compare the color of the strip with the color range indicated on the package.

4

Write down your results.
